3D Effect

We are able to produce more materials resistant to outdoor and/or harsh environmental conditions, which are recommended for the yacht manufacturing industry, as well as for exterior decorations, swimming pools, facades, terraces, garden furniture, spa centers, and more. These stones can be an extraordinary element for outdoor design, thanks to their technical characteristics, including exposure to temperature:

-20 °C ~ +110 °C / -4 °F ~ +230 °F

- resistant to UV atmospheric factors

- seawater resistant

- it can be installed both horizontally and vertically - color selection suitable for outdoor use.

0% deformation at 140 celsius degrees ( 284 Fahrenheit ) after 24hrs of continuous exposure. Special quality materials are used in order to assure maximum UV resistance, with special color development in laboratories ( Blue Agate color is a 100% result of laboratories research ).
